Externally-Sponsored Research (ESR)*,[1]

ESR: Investigator-Initiated Studies[1]

Through the ESR program, pioneering physicians and researchers develop innovative solutions to help improve the lives of patients suffering from autoimmune diseases. Inspired by their resilience, argenx supports these efforts by providing funding to help turn breakthroughs into medicines with urgency for patients

An Investigator-Initiated Study (IIS) is research developed and conducted by an independent third party as the sponsor, who assumes regulatory and legal responsibility for development, conduct, and oversight of the study

Areas of Primary Research Interest

argenx considers these following elements when reviewing proposals:

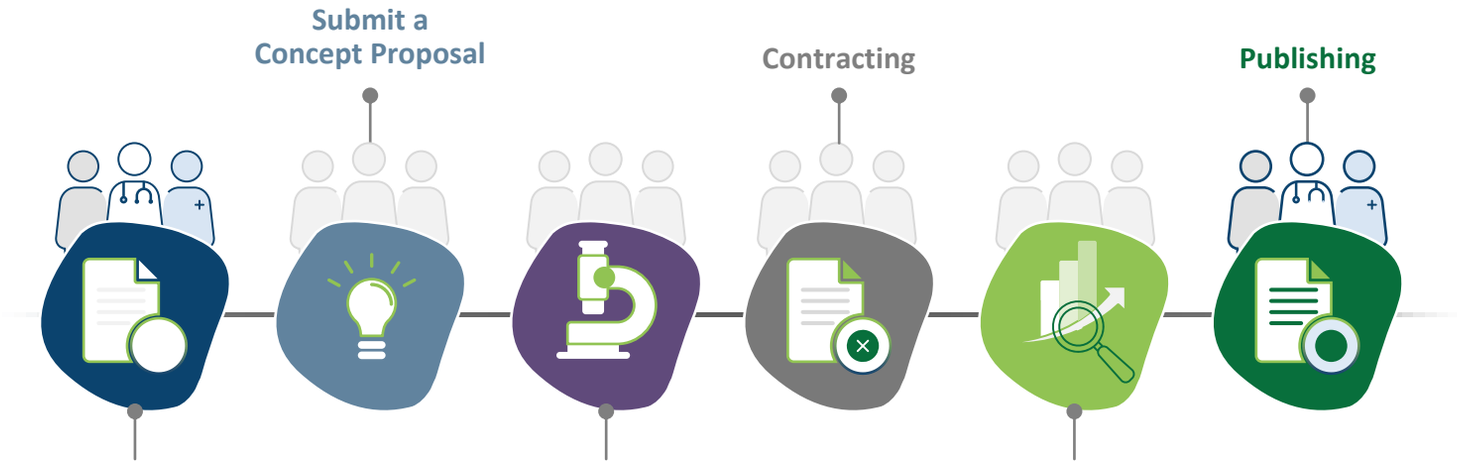

Alignment with argenx areas of interest or research that address an unmet patient need or important scientific question	Inclusion of appropriate patient populations, robust patient safety measures, and clear privacy plans	Investigator and site capable of executing the study and achieving the objectives
Clear study design, specific and appropriate objectives and endpoints, and overall study feasibility	The results are expected to be publishable in a peer-reviewed journal	Appropriateness of payment milestones and financial support limited to reasonable and necessary costs

Investigator-Initiated Study (IIS) Process

Contact us at **esr@argenx.com** if you have any questions

Once **approved**, contracting and study start-up activities will begin. argenx will provide the necessary research agreements for review and signing

Ensure that you have a plan for periodic reporting, publication, and other analysis milestones

Scan the QR code for additional details

The **first step** in initiating an IIS request is to submit a **Concept Proposal**. While it is not necessary to contact argenx before submitting a proposal, a member of the argenx Medical Affairs and Evidence Generation team is available if you have any questions about the process.
