BACKGROUND

Efgartigimod Blocks FcRn and Reduces IgG Levels

- CIDP is an autoimmune, inflammatory, demyelinating neuropathy resulting in distal/proximal weakness and/or sensory deficits, with a high treatment burden^{1,2}
- Evidence supports a role for pathogenic IgG in the development of CIDP, although there is currently not a known pathogenic autoantibody identified in most patients^{3–6}
- FcRn recycles IgG, extending its half-life, and maintaining serum concentrations of both IgG and the pathogenic IgG autoantibodies⁷
- Efgartigimod is a human IgG1 Fc fragment, a natural ligand of FcRn, engineered for increased affinity for FcRn^{8,9} (**Figure 1**)
- Efgartigimod was designed to outcompete endogenous IgG at FcRn, including pathogenic IgG, preventing recycling and promoting lysosomal degradation of IgG, without impacting its production, leading to⁸⁻¹³:
- Targeted reduction of all IgG subtypes
- No impact on other immunoglobulins (IgA or IgM)
- No reduction in albumin or increase in cholesterol levels

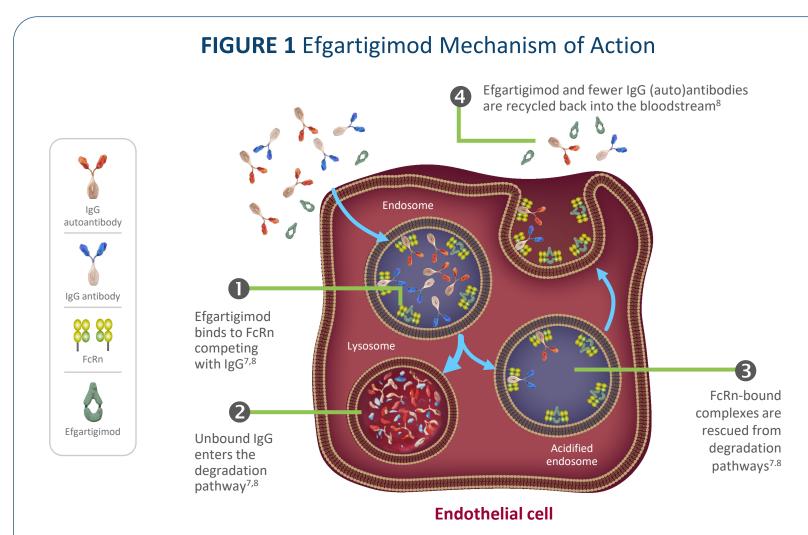

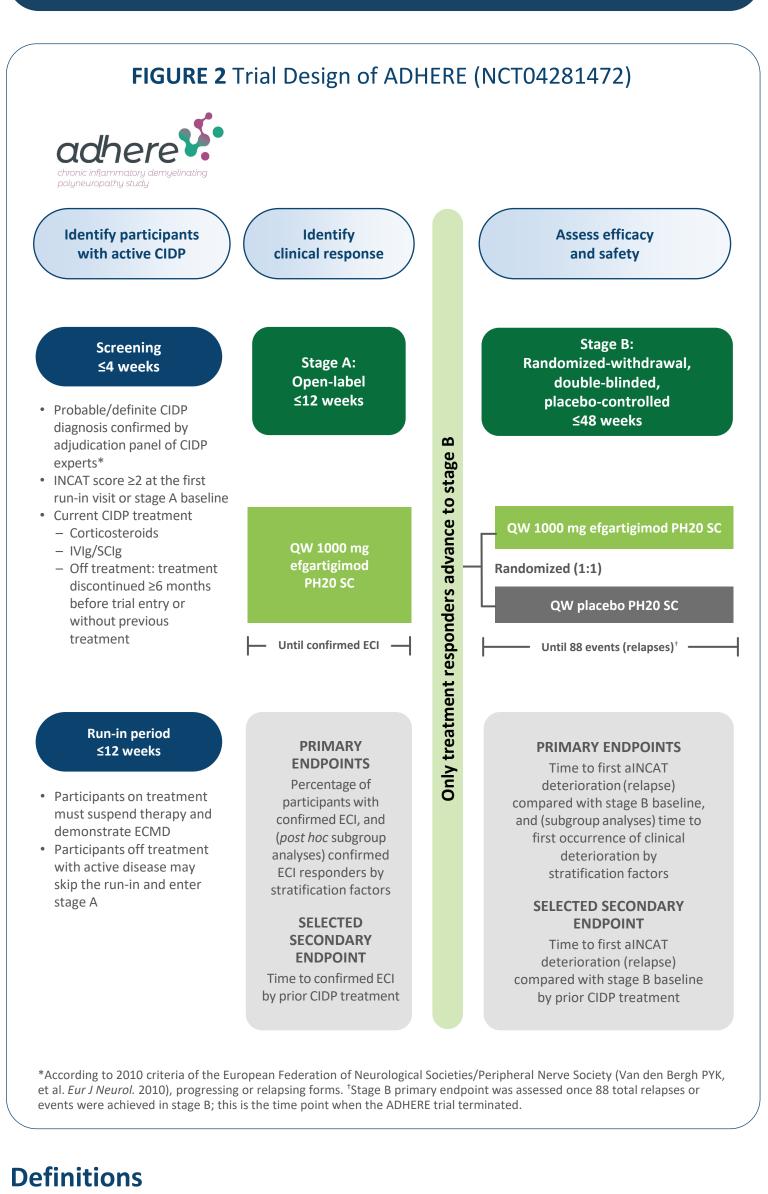

Image adapted from Kang TH, Jung ST. Boosting therapeutic potency of antibodies by taming Fc domain functions. *Exp Mol Med*. 2019 and distributed under the terms of the Creative Commons CC-BY license (https://creativecommons.org/licenses/by/4.0/).

- Efgartigimod PH20 SC is a coformulation of efgartigimod and recombinant human hyaluronidase PH20 (rHuPH20), which allows for rapid (30–90s single injection) SC administration^{14,15}
- The multi-stage, double-blinded, placebo-controlled, randomized-withdrawal ADHERE trial assessed the efficacy and safety of efgartigimod PH20 SC in CIDP (Figure 2)

OBJECTIVE

• To assess the efficacy of weekly efgartigimod PH20 SC 1000 mg by participant subgroups

METHODS

- metric), or a grip strength decrease of ≥ 8 kPa

ABBREVIATIONS

AE, adverse event; aINCAT, adjusted Inflammatory Neuropathy Cause and Treatment; CDAS, CIDP disease activity status; CI, confidence interval; CIDP, chronic inflammatory demyelinating polyneuropathy; COVID-19, coronavirus disease 2019; ECI, evidence of clinical improvement; ECMD, evidence of clinically meaningful deterioration; Fc, fragment crystallizable; FcRn, neonatal Fc receptor; HR, hazard ratio; Ig, immunoglobulin; INCAT, Inflammatory Neuropathy Cause and Treatment; I-RODS, Inflammatory-Rasch-built Overall Disability Scale; IVIg, intravenous immunoglobulin; rHuPH20, recombinant human hyaluronidase PH20; PYFU, participant-years of follow-up; QW, once weekly; SAE, serious adverse event; SC, subcutaneous; SCIg, subcutaneous immunoglobulin; SD, standard deviation; TEAE, treatment-emergent adverse event.

• Evidence of clinically meaningful deterioration (ECMD): aINCAT score increase of ≥1 points, an I-RODS score decrease of ≥4 points (centile

• Evidence of clinical improvement (ECI): clinical improvement on the parameters that the participant worsened in during run-in (≥4-point increase in I-RODS score and/or ≥8-kPa increase in mean grip strength) or clinical improvement (≥1-point decrease) in INCAT score; ECI was confirmed after these criteria were met after 4 injections and 2 consecutive visits

 Adjusted Inflammatory Neuropathy Cause and Treatment (aINCAT) **deterioration**: compared with stage B baseline, ≥1-point increase in aINCAT score confirmed at a consecutive visit after the first 1-point increase in alNCAT score, or \geq 2-point increase observed at a single visit

Efgartigimod PH20 SC Demonstrated Clinical Benefits and Was Well Tolerated

- Baseline characteristics were similar between stages A and B and well balanced between treatment groups (Table 1)
- Primary endpoint data have previously been reported¹⁶
- Across all prior CIDP medication subgroups, the majority of participants responded to treatment with efgartigimod PH20 SC (Figure 3A); efgartigimod PH20 SC significantly reduced the risk of aINCAT deterioration versus placebo, with prior IVIg/SCIg and corticosteroids subgroups showing the greatest clinical benefit (**Figure 3B**)
- The effect of efgartigimod PH20 SC was consistent across the population, and no signals for differences in response across subgroups were identified (Figures 4A and B)
- No new safety signals were identified with efgartigimod PH20 SC (**Table 2**); most TEAEs were mild or moderate in severity

TABLE 1 Demographics and Baseline Disease Characteristics

	Open-Label Stage A	Double-Blinded Stage B	
	Efgartigimod PH20 SC (N=322)	Efgartigimod PH20 SC (n=111)	Placebo (n=110)
Age, mean (SD), years	54.0 (13.9)	54.5 (13.2)	51.3 (14.5)
Sex , male, n (%)	208 (64.6)	73 (65.8)	69 (62.7)
Race, n (%)*			
Asian	89 (27.6)	33 (29.7)	34 (30.9)
Black or African American	4 (1.2)	1 (0.9)	1 (0.9)
Native Hawaiian or other Pacific Islander	1 (0.3)	0	0
White	211 (65.5)	73 (65.8)	71 (64.5)
Other	6 (1.9)	2 (1.8)	1 (0.9)
Time since diagnosis, mean (SD), years	4.9 (6.1)	3.7 (4.4)	3.8 (4.7)
Typical CIDP diagnosis, n (%)	268 (83.2)	97 (87.4)	95 (86.4)
Unstable active disease (CDAS: 5), n (%)	197 (61.2)	74 (66.7)	76 (69.1)
Prior treatment (in past 6 months), n (%)			
Corticosteroids	63 (19.6)	24 (21.6)	23 (20.9)
Immunoglobulins (IVIg, SCIg)	165 (51.2)	48 (43.2)	48 (43.6)
Off treatment	94 (29.2)	39 (35.1)	39 (35.5)
aINCAT score, mean (SD) ^{†,‡}	4.6 (1.7)	3.1 (1.5)	3.3 (1.6)
I-RODS score, mean (SD) ^{†,§}	40.1 (14.7)	53.6 (17.9)	51.2 (15.4)
Grip strength (dominant hand), mean (SD), kPa ^{+,}	38.5 (24.2)	54.9 (23.6)	58.0 (25.1)

*A total of 11 participants in stage A and 5 in stage B (2 in the efgartigimod PH20 SC group and 3 in the placebo group) did not report race. ⁺Clinical assessments were performed at the beginning of each stage. [‡]Lower aINCA⁻ scores represent improvement. SRaw sum scores of the 24-item I-RODS score (0–48) were converted to a centile metric score (0–100), with higher scores representing improvement. Nondominant hand scores were similar.

TABLE 2 Overview of Safety

	Open-Label Stage A	Double-Blinded Stage B	
6 (event rate*)	Efgartigimod PH20 SC (N=322; PYFU=46.9)	Efgartigimod Placebo PH20 SC (n=111; PYFU=56.7) (n=110; PYFU	
Any TEAE ⁺	63.4 (13.4)	64.0 (3.5)	56.4 (5.1)
Any SAE	6.5 (0.5)	5.4 (0.1)	5.5 (0.2)
Any injection site reactions	19.3 (2.6)	14.4 (0.4)	6.4 (0.2)
Discontinued due to AEs [‡]	6.8 (0.5)	2.7 (0.05)	0.9 (0.02)
Deaths [§]	0.6 (0.04)	0	0.9 (0.02)
Most common TEAEs (≥5% of participants in any group)		· · · · ·	
Injection site erythema	10.2 (1.13)	5.4 (0.11)	0
CIDP [∥]	5.3 (0.41)	0.9 (0.02)	0.9 (0.02)
Headache	5.0 (0.6)	3.6 (0.11)	1.8 (0.05)
Upper respiratory tract infection	3.4 (0.26)	1.8 (0.05)	10.0 (0.26)
COVID-19	2.2 (0.17)	17.1 (0.35)	12.7 (0.33)
Injection site bruising	1.2 (0.11)	5.4 (0.11)	0.9 (0.02)

*Event rate was calculated as the number of events divided by the total PYFU. [†]There were no reports of anaphylaxis. [‡]TEAEs grouped under Preferred Terms leading to efgartigimod PH20 SC discontinuation were cardiac arrest (n=1), injection site rash (n=1), COVID-19 (n=1), COVID-19 pneumonia (n=1), muscular weakness (n=1), CIDP (n=15), quadriparesis (n=1), and pruritus (n=1) in stage A; COVID-19 pneumonia (n=1), prostate cancer (n=1), and transitional cell carcinoma (n=1) in stage B efgartigimod PH20 SC; pneumonia (n=1) in stage B placebo SC. [§]Two deaths (cardiac arrest and deterioration of CIDP) in stage A were considered unlikely related to efgartigimod PH20 SC by the investigator; one death (pneumonia) in the placebo arm of stage B was considered possibly treatment related by the investigator. ICIDP signs/symptoms recorded as TEAEs (regardless of causality) if there was CIDP worsening/deterioration

Presented at the 2024 American Association of Neuromuscular and Electrodiagnostic Medicine (AANEM) Annual Meeting; October 15–18, 2024; Savannah, GA, USA

KEY TAKEAWAYS

Across a range of subgroups, including prior **CIDP treatment, the** majority of participants treated with efgartigimod PH20 SC responded and experienced a reduced risk of relapse versus placebo

Clinical benefit regarding confirmed ECI responders in both stages A and B, and time to first occurrence of clinical deterioration in stage B with efgartigimod PH20 SC, was demonstrated across most baseline characteristics and assessment scores

to access the ADHE manuscript online
